Boise, Idaho 83720-0050

I request Document No CC-2019-01-001, Snake River Gas & Oil requesting for a 300 acre unit inclusive of Fallon 1-10 well **be denied..**

My concerns are:

1. Section size from 640 acres, then AMI requesting change to 160 acres and now Snake River Oil & Gas requesting 300 acre - why?
2. Why is the original section size of 640 acre not sufficient?
3. What is the advantage of this 300 acre section?
4. How will it affect existing leases and royalty of mineral owners in the original 640 acre section?
5. Is the request for sizing change for the benefit of mineral owners or the drilling company's capital gain?
6. Does this sizing change determine when the Fallon and Barlow wells become operational?

Northwest Pipeline is currently laying pipelines from Fallon Well to Barlow Well then to Little Willow processing station which is done by running pipeline under Payette River to the Barlow Well to Elmore Road then back under the Payette River heading to Little Willow. Running pipelines under our rivers and drilling within 300 feet of them greatly concerns me as to the safety of property owners, land, waters, rivers and total environment

Is it not the purpose of O&G regulations to protect the property and/or mineral owners as well as our land, water and total environment? If this be the case, it appears that they are being focused more on the drilling company's best interest.

I am not opposed to O&G drilling in our state, but only if there are sufficient regulations in place, as well as enforced, that will ensure the protection and safety of our land, water, rivers and total environment . If necessary O&G regulations should be revised and enforced to ensure the same.

I request your response to my concerns and questions .

Please advise me of receipt of this email. Thank you.
