Dear Madame/Sir,

Ref: SROG request for a seamed well next to Barlow 2-14.

Please be aware of the many times SROG has applied for a well permit, the latest request being completely out of line with their stated promise of a single well to be drilled per spacing unit. Irrespective of the company's "problems" with Barlow 2-14, the fact that a second well immediately alongside this existing well assuredly invites precedent for multiple wells in the same spacing unit. This latest request by SROG can only be considered upon the closing of the Barlow well. Therefore if SROG believes a new well drilled in a new acquirer is an economic possibility they must eliminate Barlow by fully transparent methods and then following that, start anew a new application.

Without the assurance of SROG's agreement to close the Barlow well, I am opposed to their current request. Please enter my opposition to the SROG request in the record.

Yours truly,

Ed Adair
