RE: Spacing Application ending in 001

I want to address the following points:

\*Alta Mesa Idaho should never have drilled the Fallon well. AMI took a huge risk doing so while an Integration Order was pending. Even though the well was acquired by SROG, IDL should NOT be influenced because of this gross error in behavior.

\*SROG only wants the spacing unit that makes the maximum profit. This is not a goal for Idaho citizens. Our property rights deserve to be protected.

\*The spacing unit needs to cover all of the land underlying the pool. A single well needs to be drilled to produce the entire pool. This will allow correlative rights for mineral owners to be protected.
