If there is owner permission for the above to be of than 300 feet, are water wells and existing occupat least 100 feet from the plant? On 3: Operations Has the operator notified the department of which by API number, are being served by the facility? Does the operator have a flaring permit from the Do the staff demonstrate knowledge of all operator. A. Emergency shut off equipment? No staff on the staff of the staff	w the facility N/A closer bied structures N/A h wells, IDEQ? tions and locations of: duty at time of inspection	 Yes
3. Section 1.	Permission from the owners of the above to allo to be closer than 300 feet? If there is owner permission for the above to be of than 300 feet, are water wells and existing occupat least 100 feet from the plant? On 3: Operations Has the operator notified the department of which by API number, are being served by the facility? Does the operator have a flaring permit from the Do the staff demonstrate knowledge of all operations.	w the facility N/A closer bied structures N/A h wells, IDEQ? tions and locations of:	 Yes

4.	Have all meters been calibrated within the past calendar year and are records of calibration maintained for the past five years?	⊠ Yes □ No
5.	Are all meters accessible and viewable?	
6.	Is there supervisory control and data recording system in place to monitor the liquids and gas in the facility? SCADA system	⊠ Yes □ No
7.	Is all gas and liquids entering and leaving the facility accounted for within a data recording system or logbook? SCADA system	⊠ Yes □ No
Section	on 4: Location Operations	IDAPA 20.07.02.301
1.	Is the facility site fenced? A. If yes;	⊠ Yes □ No
	i. Was the fence installed within 60 days of completing facility construction?ii. Does the fence appear to:	Yes No
	 a. Maintain safe working conditions? b. Secure the facility site? Note: gate was open, facility not staffed c. Prevent access by wildlife and livestock? 	Yes ☐ NoYes ☐ NoYes ☐ No
2.	Are chemicals stored and maintained in accordance with all applicable MSDS requirements?	☐ Yes ⊠ No
3.	Are all materials related to operations palletized?	☐ Yes ☒ No
4.	Do all vehicles or materials on the site appear to be in use?	
5.	Is there less than 5% vegetation on site?	⊠ Yes □ No
6.	Is the site free from all trash, debris, or scrap metal on site?	☐ Yes ⊠ No
		/A ☐ Yes ⊠ No
	B. If trash or debris constitutes a fire hazard, is it removed to at least 100 feet from the facility, tanks or separators?	/A ⊠ Yes □ No
Section	on 5: Accidents and Fires	IDAPA 20.07.02.302
1.	Is the emergency response plan available for use or inspection?	
	A. If yes, does the operation appear to be consistent with the response plan?	Yes ☐ No
2.	Is the location free of evidence of recent fires? A If no, have they been properly reported?	✓ Yes ☐ No✓ Yes ☐ No
3.	Ask for a spill prevention and countermeasures plan. (SPCC can be located in company office). Are they aware of it?	⊠ Yes □ No
	Located in company office in New Plymouth; 10 miles / 15 minutes from LW	

Secti	on 6: Submitted Documentation	IDAPA 20.07.02.430
1.	Has the operator submitted an as-built facility design plan that contains the minimum as required in rules? See Section 8 comments	⊠ Yes □ No
2.	Has a monthly report been submitted accounting for receipt, processing, and disposition of all gas by the gas processing facility within the reporting period per Idaho Code § 47-324 (1) (b)?	/A ⊠ Yes □ No
	A. Was this report received by the 14th day following the end of the second month following the reporting period?	'A⊠ Yes No
Secti	on 7: Tank Batteries	IDAPA 20.07.02.420
1.	Are all tank batteries located at least 300 feet from any existing: (Note: construct	ed prior to 4/15/2015)
	A. Occupied structures?	⊠ Yes □ No
	B. Water wells?	⊠ Yes □ No
	C. Canals?	☐ Yes ⊠ No
	D. Ditches?	☐ Yes ⊠ No
	E. Natural or ordinary high water mark of surface waters?	☐ Yes ⊠ No
2	Is location at least 50 feet from highways when measured	
۷.	from outermost portion of the tank dike?	
3.	Are all tanks containing produced fluids or crude oil surrounded by tank dikes?	⊠ Yes □ No
4.	Are all tanks equipped to receive produced fluids surrounded by tank dikes?	
	A. If yes;	
	 i. Do the dikes have a capacity of at least 1 ½ times the volume of the largest tank? See calculations in Section 8 Comments 	⊠ Yes □ No
	ii. Is all piping and manmade improvements that perforate the dike wall or tank battery floor sealed to a minimum radius of 12" from outside edge of the piping or improvement?	⊠ Yes □ No
	iii. Are valves and quick-connect couplers at least 18" from inside wall of tank dike? Outside with shut-off, spill control devices (see #5)	☐ Yes ⊠ No
	iv. Is vegetation on top and outside surface properly maintained?	
	v. Is a ladder or other permanent device installed over the tank dike to access the containment reservoir? Not always utilized	Yes □ No
	vi. Is containment reservoir free of vegetation, storm water, produced fluids, other oil and gas field related debris, trash or flammable material?	☐ Yes ⊠ No
5.	Do drain lines have a valve installed, closed and capped off if not in use?	⊠ Yes □ No
S	ection 8: Inspection Comments	
C	omments and Issues of Concern: ection 6 Comments: As-built facility plans will need revisions submitted to reflect d installed to replace single compressor, new installation of 6-finger slug catcher a well separator units.	

Section 7 Comments:

"Northwest (oil)" tank dike volume calculations (See Section 7 above):
Inside dike dimensions: 28 inches high X 95 feet long X 50 feet wide = 11,083.33 feet³
1 US barrel = 5.61 feet³ 400 bbl = 400 X 5.61 feet³ = 2244 feet³
11,083.33 feet³ / 2244 feet³ = 4.94 times (minimum requirement = 1.5X per IDAPA 20.07.02.420.02.a)

"Southeast (produced water)" tank dike volume calculations (See Section 7 above):
Inside dike dimensions: 28 inches high X 80 feet long X 50 feet wide = 9,333.32 feet³
1 US barrel = 5.61 feet³ 400 bbl = 400 X 5.61 feet³ = 2244 feet³
9,333.32 feet³ / 2244 feet³ = 4.16 times (minimum requirement = 1.5X per IDAPA 20.07.02.420.02.a)

General Comments:

All production appears to be shut-in on day of inspection. Facility in need of general clean-up from ongoing maintenance and recent upgrade installations for compressors and slug catcher. An additional dual gate has been installed at the west side of the perimeter fence and the western end of the slug catcher. Gate was locked on day of inspection.

Portable spill containment berm has been relocated to the east corner / southeast side of the facility to accommodate the slug catcher installation. The northwest side of the berm was not staked and was lying flat which would not contain any potential spills.

Condensate separator appeared to be inoperable and undergoing leak repairs.

Section 9: Attachments

List any and all attachments including photos, samples, documents, etc. 68 photos taken, all in Facilities folder

View west of 6-finger slug catcher with gathering system riser on left.

Detailed view of east side of 6-finger slug catcher, looking west.

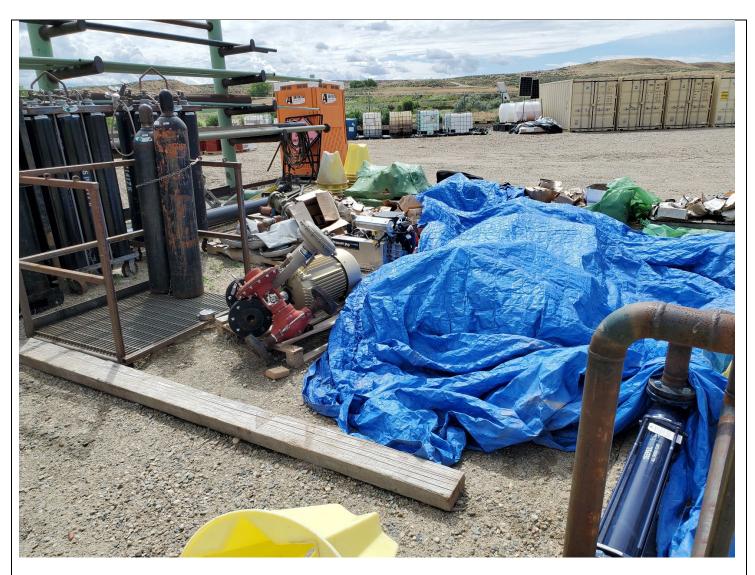

Detailed view of west side of 6-finger slug catcher, looking north.

View north of new compressors installed to replace the former single compressor.

View north of well separator units. From left to right: combined well (Kauffman 1-34, ML 1-3, ML 2-3), ML 3-10, ML 2-10 and ML 1-11 UT. ML 1-11 LT separator has been removed.

Temporary storage location of equipment and materials being utilized for current maintenance and installation operations. Stockpile is located in the northeast corner of the facility. View is south-southeast. Portable spill containment berm with palletized chemicals in background center.

Portable spill containment berm with palletized chemical containers, east side of facility. View is southwest. Spill containment berm is not staked properly and north perimeter is flat.

400 barrel produced water tanks and southeast side of containment dike, view southwest. Equipment inside containment dike from recent maintenance and installation operations. Worn foot paths over the dike indicates the access ladders are not being fully utilized and the liner is exposed in multiple areas on both dikes.
