Re: ML Investments #1-11 well, USWN 11-075-20025
Request to extend inactive well status

Dear Administrator Chollett and James,

Pursuant to IDAPA 20.07.02.501.03, operator Snake River Oil and Gas, LLC requests an extension of inactive status for the ML Investments #1-11 well, USWN 11-075-20025, for an additional 180-360 days from January 20, 2025. The basis for this request is as follows:

1. IDAPA 20.07.02.501.02 provides:

Owner's or Operator's Responsibility for Inactive Wells. The owner or operator must plug and abandon an inactive well in accordance with Section 502 of these rules within six (6) months of being notified by the Department unless the owner or operator supplies the following information within the six-month time period:

- a. A written request to extend inactive status;
- b. An individual bond, as provided for in Subsection 220.03 of these rules, if the well was covered by a blanket bond; and
- c. A description of how the well is closed to the atmosphere with a swedge and valve, packer, or other approved method, and how the well is to be maintained.

2. IDAPA 20.07.02.501.03 provides: “The Department shall review the request for approval, modification, or denial, and shall set the duration of the extension if approved. An extension shall not exceed three (3) years and may be renewed upon request.”

3. IDAPA 20.07.02.501.04 provides: “In addition to the requirements of Section 320 of these rules, inactive wells shall have a mechanical integrity test performed within two (2) years after the date of last use in order to retain inactive status.”

4. On August 15, 2023, the Department declared the ML Investments #1-11 well inactive, and set a well plugging deadline of February 15, 2024 pursuant to IDAPA 20.07.02.501.02.

5. On February 20, 2024, the Department issued an Order extending the inactive period for the well.

6. On December 20, 2024 the Administrator notified Snake River by letter that the well must be plugged and abandoned by January 20, 2025, or: “Alternatively, SROG may file a request for extension of inactive status within 30 days (January 20, 2025) of the date of this letter pursuant to IDAPA 20.07.02.501.02.a. The request for extension must be accompanied by a copy of a successful Mechanical Integrity Test (MIT) as described in IDAPA 20.0702.302 – Mechanical Integrity Testing on the seven-inch production casing. A successful MIT test is defined as a pressure drop of no greater than ten percent over thirty minutes.”

7. Snake River has discussed with the Department the potential for the ML Investments #1-11 to be utilized for gas storage, which Snake River has been actively evaluating. Currently there is no underground gas storage capacity in Idaho. Establishing gas storage in Idaho would foster development and enhance the ability of operators to maximize revenue from production, which in turn would benefit royalty and severance tax payments. Snake River considers the ML Investments #1-11 well to be a good candidate for gas storage.

8. The ML Investments #1-11 well is designated as a monitoring well to be used as part of the commissioning of the EPA’s permit to convert the DJS 2-14 well to a Class II injection well for produced water disposal. *See* EPA Final Permit ID-2D001-A, §§ C(4)(e)(ii), C(5). On August 30, 2024, EPA Region 10 granted a request to extend EPA Class II injection permit ID-2D001-A for the DJS Properties # 2-14 well until December 19, 2026. Snake River wishes to preserve the availability of the ML Investments #1-11 well for use as a monitoring well during the life of the EPA permit.

9. A rig was mobilized for attempted recompletion of the Kauffman #1-9 well in March 2024 but was inadvertently released before a test on the ML Investments #1-11 well was conducted. Snake River still may wish to attempt a recompletion of the upper Willow Sand (“Sand 1”) in the ML Investments #1-11 well, subject to current gas prices, contemporaneous cost estimates and partner approval. It is anticipated that may occur as part of a drilling program in 2025.

10. Idaho Code § 47-311 provides: “It is declared to be in the public interest to foster, encourage and promote the development, production and utilization of natural resources of oil and gas in the state of Idaho in such a manner as will prevent waste.” Idaho Code § 47-310(36)(b) defines “waste” as it applies to oil to include “underground waste” and “operating or producing of any well in a manner that causes, or tends to cause, reduction of the quantity of oil and gas ultimately recoverable from a pool under prudent and proper operations.” Idaho Code § 47-312 provides that “waste as defined in this chapter is hereby prohibited.” Idaho Code § 47-315(1) provides that “the duty to prevent waste is paramount.” Snake River respectfully submits it is consistent with the Act’s encouragement of production and prohibition of waste to permit it to make every prudent effort to recover available reserves, to utilize it for gas storage, or to utilize it in support of economical injection disposal of produced water, before requiring the ML Investments #1-11 well to be plugged.

11. The current plugging deadline for the ML 1-11 well is January 20, 2025. This request is being supplied before that date.

12. As part of its previous request for extension of inactive status for the ML Investments #1-11 well, Snake River provided the Department an individual bond for the well in the amount of \$150,000.00. The bond remains in place and Snake River will continue to maintain it.

13. The well is closed to the atmosphere by means of a double master valve configuration. All assemblies are pressure rated above any anticipated bottom hole pressure that may be encountered. The well is maintained by monitoring the surface pressures on each tubing string as well as the pressure of the tubing/casing annulus.

14. Attached to this request is a sundry notice and report of a successful MIT for the well pursuant to IDAPA 20.07.02.320.02. The test was performed on the seven-inch production casing on January 8, 2025, and reflected a pressure change of less than 5% over 30 minutes.

Based on the above, Snake River requests an extension of inactive status for the ML Investments #1-11 well to December 19, 2026, to coincide with the term of the Class II well permit. If the well is successfully recompleted and returns to production, Snake River will file a request to return the well to active status pursuant to IDAPA 20.07.02.501.05.

Thank you for your consideration. Please let me know if you need any further information.

Very truly yours,
HARDEE, PINOL & KRACKE, PLLC

Michael Christian

Describe the proposed or completed operation, clearly stating all pertinent details including estimated starting date of the proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach a copy of the Bond under which the work will be performed or provide the Bond No. on file with IDL. Required subsequent reports shall be filed within thirty (30) days following completion of the involved operations. Final Abandonment Notices shall be filed only after operations, and only after all requirements, including reclamation have been completed and the operator has determined that the site is ready for final inspection.

Snake River Oil and Gas is providing Mechanical Integrity Test performed
Wednesday, January 8, 2024 on the ML Investmenst 1-11 UT and LT.

The Annulus tested was the 7" production casing with the dual
2-3/8" production tubing strings inside.
