Hello

Thank Heaven I saw this before the comment period closed !!

This is a very deep well, penetrating hundreds of feet of basalt which is probably fractured eventually allow deep aqueous fluids with unknown contaminants to commingle with the groundwater we drink. That is Dangerous !

The location of the well is also a concern as it is positioned in an agricultural area. Surface contamination could eventually migrate into forage, food and other crops. This contamination could last for years.

The truck traffic will harm our already overtaxed highways and county roads.

Noise & light pollution will inconvenience the local residents, there are houses and people living nearby.

Air pollution is certain with big diesel motors running 24/7 for who knows how many months. Deep wells historically take weeks & even months.

This well is to be plugged, how can that ever help the economy of Idaho. Drilling for Hydrogen is a money hustle for the few and a liability for all of Idaho.

I am deeply concerned.
